

DATA RETRIEVAL

Free, online access to your sample results and the tools you need to manage them!

We understand that in order to stay competitive and run a successful maintenance program, you need access to data from wherever you are doing business—whether that’s in your own office or thousands of miles away. We make it easy for you to retrieve your sample results online so you can spend the time and money you save on other business matters.

Flexibility in Delivery & Management of Client Data

ALS can transmit reports via email, provide access through our Webtrieve™ website, or provide a data file that can be imported into other software programs. ALS recognizes that different clients have different needs and have developed tools to address those varying needs.

ALS also offers a convenient and easy to use mobile application that sends severe sample alerts directly to your mobile device. The mobile application is available for iOS and Android users and is available to all ALS customers at no additional charge. Designed for maintenance professionals in the field, the app sends instant alerts to users based on sample condition. Basic information such as unit ID, equipment type, and diagnostic commentary are displayed for rapid maintenance response and facilitating assessment to meet a client’s operational needs.

Webtrieve™

The Webtrieve™ system has a full suite of management reports and data mining capabilities. Searching for information based on a compartment type and other variables is easy and quick. Users have the ability to assess compartments by problem and testing thresholds to quickly identify the equipment for which maintenance action is needed. Webtrieve allows clients to review, email, print reports, print labels, and produce management reports. The system allows for numerous levels of access and data viewing permissions that are defined by the customer.

Whether you retrieve your data via email, Webtrieve, our mobile application or a combination of methods, ALS will make the experience quick and easy.
