

THE FUTURE OF RELIABILITY

DataConnect

The future of operational efficiency for asset reliability includes machine learning, artificial intelligence, IoT, telematics and more. So, what's the first step in getting your company on this road to the future of reliability? DataConnect is the solution you've been looking for.

Having the capability of seamlessly connecting your HORIZON sample data to your internal system allows you to eliminate the need for multiple systems. DataConnect provides a convenient, easy solution to integrating data management and telematics capabilities to prepare for the future of reliability, predictive maintenance and achieve operational efficiency.

DataConnect allows you to automatically import your HORIZON sample data into your own data system, CMMS, SAP, and update, edit and add new equipment and components to your account.

If you have your own reporting, maintenance or asset management system, experience the convenience of connecting all of your sample data, component information, historical information into one system. DataConnect is the solution for you.

Submitting samples, evaluating sample results and maintenance recommendations all in one place allows you to leverage your sample data in order to:

- » Increase visibility of your maintenance program
- » Reduce the costs of staff training
- » Quickly react to fluid analysis sample results
- » Eliminate the need for multiple systems
- » Increase ROI
- » Prove your program's value to your leadership
- » Instantly update your equipment, and add new components

Ready for the Future?

Using functionality created by our application development specialists, your internal data system communicates with our system to pass sample data between systems in real time. DataConnect has been developed using the latest and most secure encryption technology – ensuring your data is safe.

If you're ready to take the first step toward the future of reliability, we will work closely with your internal development and IT team to set up the DataConnect functionality to pass information and data between your system and HORIZON. If you are interested in getting started or want more information, email custserv@eoilreports.com and we will be in touch.
